

## Instructions

**Tools Required: Screwdriver, Allen Wrench (included)**

- 1. Turn off water supply to faucet.**
- 2. Pry off old Handle Button (A) with small screwdriver.**
- 3. Remove Handle Screw (B) and keep for re-use.**
- 4. Remove old Handle (D).**
- 5. Place Handle Adapter (D) over Faucet Stem (E) and tighten with Wrench provided.**
- 6. Place replacement Handle onto Adapter.**
- 7. Once installed, if handle contacts the faucet base or wall, remove Handle and insert correct Spacer (F) onto Adapter (choose correct Spacer that provides adequate clearance between Handle and faucet base or wall).**
- 8. Insert Handle Screw (B) into Washer (G), then into Handle and tighten.**
- 9. Place replacement Handle Button into top of Faucet Handle.**
- 10. Turn on water supply to faucet. Check for leaks.**
